TSX-V: QIA

Quia Resources Announces Start of Drilling and IP Results

June 13th, 2011: Toronto, Ontario - Quia Resources Inc. (TSX-V QIA) announced today that drilling has commenced on its 100%-owned San Lucas property in Colombia, and also announced the results from a 10km induced polarization and ground magnetic survey.

The first of two rigs has started turning over the La Rueda target and the second drill is to start turning in the next few days at the La Colina target.

Yannis Banks, Quia's CEO, said: "Given the success of our surface sampling program we are excited to begin drilling. This is one of the first drill programs, if not the first, to be initiated in the Guamoco district in what we believe has the potential to be a major gold belt. The first few holes will significantly increase our understanding of the nature and type of this mineralization and allow us to develop a deposit model with which to guide further exploration."

The Company has received results from a 10km Induced Polarization and Ground Magnetic survey over the north areas of the La Colina and La Rueda targets. The purpose of the survey was to further delineate drill targets with greater precision and to give a better understanding of the structures within the initial target areas.

The initial results have in particular identified a consistent chargeability anomaly along the eastern boundary of the uranium and thorium anomaly and coincident with the contact of the gneissic and porphyry units at the La Colina target which is 2400 metres long and up to 500 metres wide.

Yannis Banks commented: "We're very pleased with these results, as they add another layer of evidence that is consistent with all the other technical data we have amassed that indicates there is a significant and potentially disseminated system of mineralization at the La Colina target."

About Quia Resources Inc.

Quia Resources is a gold exploration Company focused in Colombia and its 100%-owned San Lucas property in the San Lucas gold belt. The San Lucas gold belt has demonstrated world-class potential and is among the least explored gold belts in Colombia. Quia is an early-mover into this belt and has established a key property

position and a strong base of technical knowledge and operating experience in the area.

Forward-Looking Statements

This press release contains or refers to forward-looking information, including statements regarding exploration results, potential mineralization, exploration plans and timing of the commencement of drilling, and is based on current expectations that involve a number of business risks and uncertainties. Factors that could cause actual results to differ materially from any forward-looking statement include, but are not limited to, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects and the other risks involved in the mineral exploration and development industry. Forward-looking statements are subject to significant risks and uncertainties, and other factors that could cause actual results to differ materially from expected results. Readers should not place undue reliance on forward-looking statements. These forward-looking statements are made as of the date hereof and the Company assumes no responsibility to update them or revise them to reflect new events or circumstances other than as required by law.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
